System Developer

INDUSTRY EXPERIENCE

E-commerce (workwear,
home electronics, fashion)
Social services/government

EDUCATION

BS, Computer Science,
Ramapo College, USA

LANGUAGES

Swedish – fluent
English – fluent

Jonah's claim to fame is having been one of the first two people to develop NetOnNet's e-commerce site, today one of Scandinavia's leading online stores. The company has since grown from 15 FTE in Sweden to 900 in Norway and Sweden and 300 MSEK revenue.

He started his career working on the East coast of US doing web development for clients such as Fuji, Sankyo, and Becton Dickinson (BD), one of the world's largest global medical technology companies.

Jonah went on to build a new system used across Sweden by government employees, a demanding program that needed to safely manage classified data. He also optimized the user experience at Nelly.com, the largest online fashion house in the Nordic countries, with 850 brands.

Three times (3X), Jonah has worked on replacing legacy systems with modern systems developed in parallel.

Building value-added services (VAS) for an e-commerce site with 5,000 retailers around the world was a proud moment for Jonah, and one he received much praise for. His web-based tool replaced a very time-consuming manual process.

Fellow workers say Jonah excels at coming up with solutions to problems (*"The word 'can't' does not exist in Jonah's world. If there is a problem, he will find a solution."*) and that he is a team player who is good at making everyone feel included.

In his spare time, Jonah plays the guitar in a cover band, does CrossFit, and coaches 12-year-old ice hockey players.
